SUMMARY

Economics and Statistics graduate with hands-on analytics experience at Newell Brands, building forecasting models in Databricks and executive Power BI dashboards that informed workforce and equipment planning. Skilled in Python, R, and SQL, with a track record of turning large datasets into clear business recommendations.

TECHNICAL SKILLS

Languages & Querying: Python, R, SQL

Analytics & BI: Power BI, Databricks, Alteryx, Visier, Excel (Expert Certified), PowerPoint, Google Suite

Core Competencies: Predictive Modeling & Forecasting, Data Cleaning, Data Visualization & Storytelling

EDUCATION

University of Central Florida, Orlando, FL

May 2026

Bachelor of Science in Business Administration, Economics

Minor in Statistics

PROFESSIONAL EXPERIENCE

People Analytics Intern: *Newell Brands, Remote*

May 2025 – Aug 2025

- Built Random Forest and Prophet forecasting models in Databricks to predict employee onboarding/offboarding volume, enabling proactive IT workforce and equipment planning.
- Developed Power BI dashboards that translated HR and IT data into IT service-demand trends for senior stakeholders.
- Delivered data-driven recommendations to HR and IT leadership to inform equipment provisioning and staffing decisions.

Tennis Camp Leader: *Temple Terrace Recreation Dept., Temple Terrace, FL*

May 2022 – Aug 2023

- Designed and led daily tennis instruction for 10–20 youth participants; handled check-in and front-line customer service.

ACADEMIC PROJECTS

Strategic Growth Analysis of Costco Wholesale: *UCF Capstone (MAN4720), Team of 5*

- Co-developed a 10-year discounted cash flow model in Excel (NPV, IRR, depreciation, best/worst-case scenarios) to evaluate a proposed EV fast-charging network. Projected a 27.8% IRR vs. a 20% hurdle rate and ~\$45.5M NPV on a ~\$124M investment.
- Conducted competitive and industry analysis (SWOT, Porter's Five Forces, PESTEL), benchmarking Costco against Sam's Club and BJ's to identify growth opportunities.
- Compiled market research and financial data (GlobalData, MarketLine) into a phased strategic recommendation and fact-supported business case.

Flight Price Prediction Model: *STA4241*

- Built and compared three models (linear regression, Elastic Net, Random Forest) in R on 300K+ records to predict flight ticket prices.
- Selected Random Forest as final ($R^2 = 0.97$, ~50% lower RMSE than other models); identified class, airline, and booking lead time as top price drivers.

Diabetes Risk Classification Project: *STA4173*

- Built and compared multinomial and binary logistic regression models in R on a 250K-record CDC dataset, addressing class imbalance via upsampling.
- Achieved 0.81 AUC and ~85% accuracy with the binary model; identified BMI, age, and blood pressure as strongest diabetes predictors.

LEADERSHIP & INVOLVEMENT

- UCF - Black & Gold Analytics Club: exploratory analysis and statistical storytelling in Python/R (2023–2026); founding member of Pickleball Club (2022–2026).
- 120+ volunteer hours (Metropolitan Ministries, Feeding Tampa Bay, Tampa Bay Humane Society)
